Appendix A - List of Impaired (Category 5) Waters in 2006*

Assessment Unit ID	Waterbody Name	City / County	Assessment Unit Description

Potomac and Shenandoah River Basins

TMDL Watershed Name: **Accokeek Creek**

TMDL Group ID: **00816**

VAN-A29R_ACC01A00	Accokeek Creek	STAFFORD CO	Segment begins at the confluence with an unnamed tributary to Accokeek Creek, approximately 0.33 rivermile downstream from Route One at rivermile 8.62, and continues downstream until the end of the free-flowing waters.

VA Overall AU Category: **5A**

Use	Impairment	4.20 MILES	TMDL Group ID	First Listed on 303(d)	TMDL Schedule	Impairment Specific Comments and/or Impairment Specific VA Category
Aquatic Life	**pH**		00816	**2004**	**2016**	Sufficient exceedances of the instantaneous pH criterion (2 of 19 samples - 10.5%) were recorded at DEQ's ambient water quality monitoring station (1AACC006.13) at the Route 608 bridge to assess this stream segment as not supporting of the aquatic life use for the 2006 water quality assessment.

Sources: Source Unknown

TMDL Group ID: **00817**

VAN-A29R_ACC01A00	Accokeek Creek	STAFFORD CO	Segment begins at the confluence with an unnamed tributary to Accokeek Creek, approximately 0.33 rivermile downstream from Route One at rivermile 8.62, and continues downstream until the end of the free-flowing waters.

VA Overall AU Category: **5A**

Use	Impairment	4.20 MILES	TMDL Group ID	First Listed on 303(d)	TMDL Schedule	Impairment Specific Comments and/or Impairment Specific VA Category
Recreation	**Escherichia coli**		00817	**2006**	**2014**	Sufficient exceedances of the instantaneous E.coli bacteria criterion (3 of 9 samples - 33.3%) were recorded at DEQ's ambient water quality monitoring station (1AACC006.13) at the Route 608 bridge to assess this stream segment as not supporting of the recreation use goal for the 2006 water quality assessment. The segment was previously listed for a fecal coliform bacteria impairment, beginning in 2002.

Sources: Source Unknown

TMDL Watershed Name: **Accotink Creek**

TMDL Group ID: **00313**

VAN-A15R_ACO01A00	Accotink Creek	FAIRFAX CO	Segment begins at the confluence with Calamo Branch and continues downstream until the tidal waters of Accotink Bay.

VA Overall AU Category: **5A**

Use	Impairment	8.62 MILES	TMDL Group ID	First Listed on 303(d)	TMDL Schedule	Impairment Specific Comments and/or Impairment Specific VA Category
Aquatic Life	**Benthic-Macroinvertebrate Bioassessments (Streams)**		00313	**1998**	**2010**

Assessment Unit ID	Waterbody Name	City / County	Assessment Unit Description

Potomac and Shenandoah River Basins

TMDL Watershed Name: **Accotink Creek**

TMDL Group ID: **01784**

VAN-A15R_ACO01A00	Accotink Creek	FAIRFAX CO	Segment begins at the confluence with Calamo Branch and continues downstream until the tidal waters of Accotink Bay.

VA Overall AU Category: **5A**

Use	Impairment	8.62 MILES	TMDL Group ID	First Listed on 303(d)	TMDL Schedule	Impairment Specific Comments and/or Impairment Specific VA Category
Recreation	**Fecal Coliform**		01784	**2004**	**2016**	Although the data obtained during the 2006 assessment window shows exceedances of the instantaneous fecal coliform bacteria criterion (1 of 16 samples - 6.2%) is categorized as fully supporting, no additional data has been collected from the DEQ's ambient water quality monitoring station (1AACO006.10) at Route 790 since the previous assessment window, when the stream reach was first listed as impaired. The segment shall remain categorized as impaired.

Sources: Source Unknown

TMDL Group ID: **60150**

VAN-A15R_ACO04A02	Accotink Creek	FAIRFAX CITY FAIRFAX CO	Segment begins at the confluence with Daniels Run, in the City of Fairfax, and continues downstream until the confluence with Bear Branch.

VA Overall AU Category: **5A**

Use	Impairment	1.19 MILES	TMDL Group ID	First Listed on 303(d)	TMDL Schedule	Impairment Specific Comments and/or Impairment Specific VA Category
Recreation	**Escherichia coli**		60150	**2004**	**2014**	Sufficient exceedances of the instantaneous E.coli bacteria criterion (13 of 13 samples - 100%) were recorded at USGS monitoring station 01653900 to assess this stream segment as not supporting of the recreation use goal for the 2006 water quality assessment. The segment was previously listed for a fecal coliform bacteria impairment, beginning in 2002.

Sources: Source Unknown

Appendix A - List of Impaired (Category 5) Waters in 2006*

Assessment Unit ID	Waterbody Name	City / County	Assessment Unit Description

Potomac and Shenandoah River Basins

TMDL Watershed Name: **Aquia Creek**

TMDL Group ID: **00811**

VAN-A27R_AUA01A00	Aquia Creek	STAFFORD CO	Segment begins at the confluence with Cannon Creek, approximately 0.1 rivermile downstream from Route 610, and continues downstream until Smith Lake (Aquia Reservoir).

VA Overall AU Category: **5A**

Use	Impairment (6.59 MILES)	TMDL Group ID	First Listed on 303(d)	TMDL Schedule	Impairment Specific Comments and/or Impairment Specific VA Category
Recreation	**Escherichia coli**	00811	**2006**	**2016**	Sufficient exceedances of the instantaneous E.coli bacteria criterion (3 of 10 samples - 30.0%) were recorded at DEQ's ambient water quality monitoring station (1AAUA014.51) at the Route 641 bridge to assess this stream segment as not supporting of the recreation use goal for the 2006 water quality assessment.
	Sources: Source Unknown				
Recreation	**Fecal Coliform**	00811	**2004**	**2016**	Sufficient exceedances of the instantaneous fecal coliform bacteria criterion (4 of 18 samples - 22.2%) were recorded at DEQ's ambient water quality monitoring station (1AAUA014.51) at the Route 641 bridge to assess this stream segment as not supporting of the recreation use goal for the 2006 water quality assessment.
	Sources: Source Unknown				

TMDL Group ID: **00812**

VAN-A28E_AUA01B00	Aquia Creek	STAFFORD CO	Segment extends from rivermile 4.28 to rivermile 3.28 in Aquia Creek encompassing a 0.5-mile radius around station 1AAUA003.71. Portion of CBP segment POTOH.

VA Overall AU Category: **5A**

Use	Impairment (0.37 SQUARE MILES)	TMDL Group ID	First Listed on 303(d)	TMDL Schedule	Impairment Specific Comments and/or Impairment Specific VA Category
Aquatic Life	**Chloride**	00812	**2004**	**2016**	For the 2004 assessment, more than two chloride exceedances were recorded within a three-year period resulting in an assessment of not supporting the aquatic life use goal. While the data within the 2006 assessment period show only one exceedance at DEQ ambient station 1AAUA003.71, the impairment remains because no new data has been collected since the last assessment period. This segment is considered transition zone tidal waters. The Water Quality Standards stipulate that the more stringent of either the freshwater or saltwater criteria apply. Therefore, these waters are listed as impaired. However, a TMDL is not necessary as the chloride levels are attributable to the natural estuarine conditions.
	Sources: Natural Sources				
Wildlife	**Chloride**	00812	**2004**	**2016**	For the 2004 assessment, more than two chloride exceedances were recorded within a three-year period resulting in an assessment of not supporting the aquatic life use goal. While the data within the 2006 assessment period show only one exceedance at DEQ ambient station 1AAUA003.71, the impairment remains because no new data has been collected since the last assessment period. This segment is considered transition zone tidal waters. The Water Quality Standards stipulate that the more stringent of either the freshwater or saltwater criteria apply. Therefore, these waters are listed as impaired. However, a TMDL is not necessary as the chloride levels are attributable to the natural estuarine conditions.

POTMH

VA Overall AU Category: **5A**

Use	Impairment	2.52 SQUARE MILES	TMDL Group ID	First Listed on 303(d)	TMDL Schedule	Impairment Specific Comments and/or Impairment Specific VA Category
Aquatic Life	**Oxygen, Dissolved**		01775	**2002**	**2010**	VAP-A31E-02 and VAP-A32E-07

The segment was initially assessed as not supporting of the Aquatic Life use support goal in 2002 because of a dissolved oxygen violation rate of 2/5 at 1ANOM000.50. A depth profile consisting of 5 samples was taken 8/29/1996. The deepest two samples violated the standard. During the 2006 cycle, the DO standard in the Chesapeake Bay and its tidal tributaries was converted to a segment-wide standard. The deepwater dissolved oxygen standards in the mesohaline Potomac both violated in 2006. This deepwater impairment is now included as part of VAP-A31E-02.

The mesohaline portion of the Potomac failed the open water summer dissolved oxygen criteria during the 2006 cycle.

Sources:
- Agriculture

VA Overall AU Category: **5A**

Use	Impairment	0.39 SQUARE MILES	TMDL Group ID	First Listed on 303(d)	TMDL Schedule	Impairment Specific Comments and/or Impairment Specific VA Category
Aquatic Life	**Estuarine Bioassessments**		60067	**2006**	**2018**	Based on the Coastal 2000 weight of evidence analysis, utilizing bulk chemical data, toxicity test data, and an evaluation of benthic community conditions. Conclusions noted that some possibilities for benthic alteration could be a result of nutrient enrichment, habitat condition, habitat type, or a high energy environment. However, toxic contaminants are an unlikely cause of the stressed community. The low diversity of benthic faunal taxa suggest organic/nutrient enrichment, but bottom dissolved oxygen at the time of sampling was not depressed (10.5 mg/L). Note that sediment total organic carbon was very low (<0.2%) and that the sample was almost all sand (83.3%). It is possible that toxics were present nearby, but the sediment sample collected did not indicate any contamination problem.

During the 2006 cycle, the revised Chesapeake Bay water quality standards were adopted. The mainstem portion of the Chesapeake Bay within CB5MH had been previously assessed by DEQ as impaired for dissolved oxygen. During the 2006 cycle, the 30-day mean dissolved oxygen was acceptable, however there was insufficient data available to assess the other open water criteria, therefore the mainstem could not be delisted. Because the new standards are based on segment-wide dissolved oxygen, the coastal tributaries are also considered impaired for dissolved oxygen until such time as the remaining open water criteria can be assessed.

Recreation	**Escherichia coli**		00062	**2006**	**2003**	A fecal coliform TMDL for the Goose Creek watershed was approved by the U.S. EPA on May 1, 2003. The sources of fecal coliform bacteria requiring reductions are direct deposition from cattle, pasture run-off, and human contributions from failing septics systems and straight pipes. Sufficient exceedances of the instantaneous E.coli bacteria criterion (5 of 13 samples - 38.5%) were recorded at DEQ's ambient water quality monitoring station (1AGOO002.38) at the Route 7 bridge to assess this stream segment as not supporting of the recreation use goal for the 2006 water quality assessment. The segment was previously listed for a fecal coliform bacteria impairment, beginning in 2002. Segment listed as Category 4A - Federal ID 18813.

Use	Impairment	4.77 MILES	TMDL Group ID	First Listed on 303(d)	TMDL Schedule	Impairment Specific Comments and/or Impairment Specific VA Category
Aquatic Life	**Benthic-Macroinvertebrate Bioassessments (Streams)**		00071	**1998**	**2004**	A benthic TMDL for the Goose Creek watershed was approved by the U.S. EPA on April 26, 2004. Goose Creek and Little River are borderline cases of aquatic life impairments. For the most part, they are classified as slightly impaired when compared to their reference sites. The presence of sediment tolerant species in greater abundance in Goose Creek and Little River represents the clearest difference between the impaired sites and their references. It is therefore likely that sediment loads in excess of those found in their references are the cause of the differences observed in the macroinvertebrate communities in Goose Creek and Little River. Segment listed as Category 4A - Federal ID 18814.

Shellfishing	**Fecal Coliform**	0.10	SQUARE MILES	85012	**1998**	**2010**	VAP-A34E-05 Headly Cove, Mill Creek and a portion of the Coan River were assessed as impaired of the Shellfish Use in 1998 because of VDH SFC 145H and 145I, 2/25/1997. During the 2004 cycle, the segments expanded and merged due to VDH-DSS Condemnation Notice 145H, 11/27/2002. However the 12/18/2003 Coan River Shellfish TMDL report only addressed the original impairments, which will be considered Cat. 4A. The TMDL for the 2004 area is due in 2016. In addition, the segment expanded downstream again in the 2006 cycle; the TMDL for that portion is due in 2018 and is addressed in fact sheet VAP-A34E-32 (10068).

Use	Impairment	1265.00 ACRES	TMDL Group ID	First Listed on 303(d)	TMDL Schedule	Impairment Specific Comments and/or Impairment Specific VA Category
Aquatic Life	**Oxygen, Dissolved**		00282	**2002**	**2010**	The aquatic life use is impaired due to low dissolved oxygen in the bottom waters of the reservoir. All five stations report excursions of the minimum dissolved oxygen criterion for Class III nontidal waters of 4.0 mg/L. Greater than 10% of samples exceed the criterion in the bottom waters for all four stations where stratification occurred (RE02, RE15, RE30, and RE35) and at two stations during periods with no stratification occurring (RE01 and RE02). It is believed that the aeration process performed by the county water authority near station RE02 is the cause of the low dissolved oxygen values observed in the surface waters.

Fish Consumption	**PCB in Fish Tissue**		20005	**2002**	**2014**	The fish consumption use is categorized as impaired due to a Virginia Department of Health, Division of Health Hazards Control, PCB fish consumption advisory. The advisory, dated 4/19/99 and modified 12/13/04, limits consumption of American eel, bullhead catfish, channel catfish less than eighteen inches long, largemouth bass, anadromous (coastal) striped bass, sunfish species, smallmouth bass, white catfish, white perch, gizzard shad, and yellow perch consumption to no more than two meals per month. The advisory also restricts the consumption of carp and channel catfish greater than eighteen inches long. The affected area includes the tidal portions of the following tributaries and embayments from the I-395 bridge (above the Woodrow Wilson Bridge) to the Potomac River Bridge at Route 301: Fourmile Run, Hunting Creek, Little Hunting Creek, Pohick Creek, Accotink Creek, Occoquan River, Neabsco Creek, Powell Creek, Quantico Creek, Chopawamsic Creek, Aquia Creek, and Potomac Creek.

VAN-A26E_QUA01A04	**Quantico Creek**	PRINCE WILLIAM CO	Segment extends to a 0.5-mile radius around station 1AQUA001.09. Portion of CBP segment POTTF.

VA Overall AU Category: **5A**

Use	Impairment	0.43 SQUARE MILES	TMDL Group ID	First Listed on 303(d)	TMDL Schedule	Impairment Specific Comments and/or Impairment Specific VA Category
Aquatic Life	**Estuarine Bioassessments**		60109	**2006**	**2018**	Based on the Coastal 2000 weight of evidence analysis, utilizing bulk chemical data, toxicity test data, and an evaluation of benthic community conditions. Conclusions noted that organic enrichment, as well as chemical contamination, may be responsible for the impairment. The survey revealed low diversity of benthic faunal taxa.

VAN-A19R_SOT01A00	South Run	FAUQUIER CO PRINCE WILLIAM CO	Segment begins downstream of Lake Brittle on South Run and continues downstream until the confluence with Lake Manassas (Broad Run).

VA Overall AU Category: **5A**

Use	Impairment	2.34 MILES	TMDL Group ID	First Listed on 303(d)	TMDL Schedule	Impairment Specific Comments and/or Impairment Specific VA Category
Aquatic Life	**Benthic-Macroinvertebrate Bioassessments (Streams)**		00229	**1998**	**2010**	This segment was included in Part I of the 1998 303(d) report as partially supporting the aquatic life use due to a moderate benthic impairment noted at the DEQ biological monitoring station 1aSOT001.44 at Route 215. Based on biological survey results from the 2002 and 2004 305(b) assessment periods, this stream segment was determined to be slightly impaired. While the benthic community integrity showed an improvement from the 1998 303(d) list, this was not sufficient to warrant removing this segment from the impaired waters list. Therefore, the stream segment remains impaired for the benthic macroinvertebrate community.

VA Overall AU Category: **5A**

Use	Impairment	6.54 MILES	TMDL Group ID	First Listed on 303(d)	TMDL Schedule	Impairment Specific Comments and/or Impairment Specific VA Category
Recreation	**Fecal Coliform**		00339	**1998**	**2010**	VAP-G03R-02

Bailey Creek was initially included on the 303(d) list in 1994 based on water quality monitoring performed at the Route 10 bridge (2-BLY000.65) and historical water quality problems in Bailey Bay. The causes of impairment were excessive DO and fecal coliform standard violations recorded at 2-BLY000.65.

A special study was performed in 1997 and 1998 to delineate the area of impact. The tidal station 2-BLY000.65 continues to show impairment, however the riverine stations in Bailey Creek did not show impairment for dissolved oxygen in the 2002 cycle, therefore dissolved oxygen was removed as an impairment during the 2004 cycle. It continued to show fecal coliform impairment.

There has been no additional monitoring in the segment since 2000, therefore the previous assessment is carried over to 2006.

Fish Consumption	**Aldrin**		00526	**2002**	**2014**	VAP-G03R-02

The non-tidal portion of Bailey Creek was assessed in the 2002 cycle as impaired of the Fish Consumption Use goal because of exceedances of the human health screening levels for PCBs and aldrin in fish studies at station 2-BLY005.72 in 1997. Heptachlor epoxide was found in one species, so is considered an "observed effect." The TMDLs for aldrin and PCBs in fish are due in 2014.

There has been no additional monitoring in the segment since 2000, therefore the previous assessment is carried over to 2006.

Aquatic Life	**Oxygen, Dissolved**		01782	**2006**	**2010**	VAP-G03E-02

The James River from the Appomattox River to the Chickahominy River was originally listed on the 1998 list as fully supporting but threatened of the Aquatic Life Use goal based on chlorophyll a violations. During the 1998 cycle, EPA extended the segment upstream to the fall line and downgraded the river to not supporting the Aquatic Life Use, citing nutrient concerns.

In previous cycles, the mainstem James River had acceptable dissolved oxygen levels. In addition the entire tidal freshwater portion (fall line to just above the Chickahominy River) has good benthic community based on the results from the Chesapeake Bay Benthic Index of Biological Community; therefore the James River from the fall line to the oligohaline boundary was considered impaired solely for Nutrients/Eutrophication Biological Indicators (EPA Overlist).

During the 2006 cycle, the CB water quality standards were implemented. The Lower Tidal Freshwater James River failed the Shallow Water Use SAV acreage requirements. However, it also failed the 30-day Open Water summer dissolved oxygen criteria. There was insufficient information to assess the other OW criteria or the Migratory Spawning Use.

TMDL Group ID: **01782**

Open-Water Aquatic Life	**Oxygen, Dissolved**	01782	**2006**	**2010**	VAP-G03E-02

The James River from the Appomattox River to the Chickahominy River was originally listed on the 1998 list as fully supporting but threatened of the Aquatic Life Use goal based on chlorophyll a violations. During the 1998 cycle, EPA extended the segment upstream to the fall line and downgraded the river to not supporting the Aquatic Life Use, citing nutrient concerns.

In previous cycles, the mainstem James River had acceptable dissolved oxygen levels. In addition the entire tidal freshwater portion (fall line to just above the Chickahominy River) has good benthic community based on the results from the Chesapeake Bay Benthic Index of Biological Community; therefore the James River from the fall line to the oligohaline boundary was considered impaired solely for Nutrients/Eutrophication Biological Indicators (EPA Overlist).

During the 2006 cycle, the CB water quality standards were implemented. The Lower Tidal Freshwater James River failed the Shallow Water Use SAV acreage requirements. However, it also failed the 30-day Open Water summer dissolved oxygen criteria. There was insufficient information to assess the other OW criteria or the Migratory Spawning Use.

In the 2004 cycle, the James River from Brandon Point downstream to the Chickahominy River confluence was assessed as impaired of the Aquatic Life Use and Wildlife Uses due to chloride violations (see 2004 fact sheet VAP-G03E-02.) The chloride TMDL is due in 2016. In the 2006 cycle, the segment remained impaired.

The James River from the Appomattox River to the Chickahominy River was originally listed on the 1998 list as fully supporting but threatened of the Aquatic Life Use goal based on chlorophyll a violations. During the 1998 cycle, EPA extended the segment upstream to the fall line and downgraded the river to not supporting the Aquatic Life Use, citing nutrient concerns.

Recreation	**Fecal Coliform**		01171	**2004**	**2016**	VAP-G09R-01

In the 2004 cycle, Beaverdam Creek was assessed as not supporting the Recreation Use goal based on a fecal coliform violation rate of 3/19 at 2-BDM004.12. The fecal coliform TMDL is due in 2016. There has been no additional monitoring since 2001, therefore the segment remains impaired although there are no fecal coliform violations during the 2006 window. Further monitoring is recommended to confirm the impairment.

Aquatic Life	**pH**		01305	**2004**	**2016**	VAP-J16R-02

The DO standards violation rate for Blackman Creek was 6/12, and the pH violation rate was 3/12. However, it is suspected the low DO and pH are due to natural conditions of the watershed. Therefore, for the 2006 cycle, Blackman Creek is assessed as Cat. 5C.

The segment also had observed effects for violation in Total Phosphorus standards with exceedances of 2/12.

VA Overall AU Category: **5A**

Use	Impairment		TMDL Group ID	First Listed on 303(d)	TMDL Schedule	Impairment Specific Comments and/or Impairment Specific VA Category
Aquatic Life	**Oxygen, Dissolved**	1500.00 ACRES	00449	**1998**	**2010**	VAP-G07L-01

Chickahominy Lake was included on EPA's 1998 list of "Waters Identified to Virginia for Listing Consideration During Development of Next List." No parameter of concern was listed.

Low DO in the bottom waters was observed at station 2-CHK025.15, which is closest to the dam. However, the summer temperature difference was <4°C, therefore the lake is considered not stratified using the 2006 guidance. It is assessed as not supporting the Aquatic Life Use (Cat. 5A).

The source of the dissolved oxygen violations is unknown but is believed to be exacerbated by nutrient overenrichment.

Aquatic Life	**Oxygen, Dissolved**	8.23 MILES	00447	**1996**	**2010**	VAP-G06R-01N

The Chickahominy River has been assessed as not supporting of the Aquatic Life use goal since 1996 based on dissolved oxygen and pH violations at the Route 360 bridge (2-CHK062.57) and at the Route 156 bridge (2-CHK055.04). During the year 2006 cycle, the dissolved oxygen violation rates were 11/37 and 7/37, respectively.

Aquatic Life	**Oxygen, Dissolved**	2.33 MILES	10122	**2006**	**2016**	VAP-G06R-10

Deep Run is assessed as not supporting of the Aquatic Life Use based on a pH standard violation rate of 15/15 at 2-DER000.65. This is a TMDL station to address the pH impairment in White Oak Swamp. The Natural Conditions Assessment for low pH in White Oak Swamp was completed and recommends that White Oak Swamp and its tributaries be reclassified as Class VII swampwaters. Until the standards can be revised, the watershed will be considered Cat. 4C for pH.

During the 2006 cycle, Deep Run was also considered impaired of the Aquatic Life Use due to a dissolved oxygen violation rate of 2/15 at 2-DER000.65. Although natural conditions are also suspected, the report only addressed pH, therefore the segment will be classified as Category 5C.

James River Basin

TMDL Watershed Name: **Eley Swamp**

TMDL Group ID: **00350**

VAT-G12R_ELE01A00	Eley Swamp tributary to Lake Cohoon (PWS)	SUFFOLK CITY	Located northeast of Mrtyle. Segment extends 2.40 mi. upstream and 2.20 mi. downstream from Rt. 607 crossing. Portion of Portsmouth water supply reservoirs.

VA Overall AU Category: **5C**

Use	Impairment	4.60 MILES	TMDL Group ID	First Listed on 303(d)	TMDL Schedule	Impairment Specific Comments and/or Impairment Specific VA Category
Aquatic Life	**pH**		00350	**1998**	**2010**	The Aquatic Life Use impairment, based on pH concentrations below the allowable DEQ minimum criteria (6.0 SU) from the 1998 303d listing is retained due to lack of more recent data. The impairment is believed caused by natural swamp water conditions of low flow velocity and high organic conditions with tannic acids present (these tannic acids may be the cause of the low pH excursions). This segment is containe din the 1999 EPA Consent Decree (Attachment A, Category 1, Part 2).

Aquatic Life	**pH**		00338	**1998**	**2010**	VAP-G03R-01

In 1998, the entire mainstem of Gunns Run was assessed not supporting of the Aquatic Life use support goal based on pH violations recorded at the Route 618 bridge (2-GUN004.00). The pH TMDL is due in 2010.

In the 2002 cycle, a pH and DO violation rate of 0/3 at 2-GUN002.58 between 1994 and 1997 was used to assess the lower reach as fully supporting. However, dissolved oxygen was also identified as an impairing cause. This TMDL is due in 2014.

During the year 2006 cycle, the pH and DO violations at 2-GUN004.00 continued (4/16 and 12/16, respectively.)

VA Overall AU Category: **5A**

Use	Impairment	0.02 SQUARE MILES	TMDL Group ID	First Listed on 303(d)	TMDL Schedule	Impairment Specific Comments and/or Impairment Specific VA Category
Recreation	**Escherichia coli**		00441	**1996**	**2010**	VAP-G01E-01

The James River from the fall line to the Appomattox River has been assessed as not supporting of the Recreation use support goal based on the results of a summer special study in the fall zone. The special study was designed to monitor the effects of summertime rain and combined sewer overflow (CSO) events on water quality in the James River and to monitor the effects of Richmond's CSO abatement efforts.

The segment has been included on the Impaired Waters list for fecal coliform since 1996. During the 2004 and 2006 cycles, the bacteria standard changed to E.coli for those stations with enough data. Some of the areas in this segment have converted to the E.coli standard, for others the fecal coliform standard is still in effect. The TMDL for both is due in 2010.

Bacteria impairment is noted at the following stations:

2-JMS109.39
2-JMS107.51
2-JMS104.16
2-JMS099.30
2-JMS087.01

Aquatic Life	**Aquatic Plants (Macrophytes)**		00442	**2006**	**2010**	VAP-G03E-02

The James River from the Appomattox River to the Chickahominy River was originally listed on the 1998 list as fully supporting but threatened of the Aquatic Life Use goal based on chlorophyll a violations. During the 1998 cycle, EPA extended the segment upstream to the fall line and downgraded the river to not supporting the Aquatic Life Use, citing nutrient concerns.

In previous cycles, the mainstem James River had acceptable dissolved oxygen levels. In addition the entire tidal freshwater portion (fall line to just above the Chickahominy River) has good benthic community based on the results from the Chesapeake Bay Benthic Index of Biological Community; therefore the James River from the fall line to the oligohaline boundary was considered impaired solely for Nutrients/Eutrophication Biological Indicators (EPA Overlist).

During the 2006 cycle, the CB water quality standards were implemented. The Upper Tidal Freshwater James River from the fall line to the Appomattox failed the Shallow Water Use SAV criteria. The 30-day Open Water dissolved oxygen criteria were acceptable, but there was insufficient information to assess the other OW criteria or the Migratory Spawning Use.

Shallow-Water Submerged Aquatic Vegetation	**Aquatic Plants (Macrophytes)**	00442	**2006**	**2010**	VAP-G03E-02	The James River from the Appomattox River to the Chickahominy River was originally listed on the 1998 list as fully supporting but threatened of the Aquatic Life Use goal based on chlorophyll a violations. During the 1998 cycle, EPA extended the segment upstream to the fall line and downgraded the river to not supporting the Aquatic Life Use, citing nutrient concerns. In previous cycles, the mainstem James River had acceptable dissolved oxygen levels. In addition the entire tidal freshwater portion (fall line to just above the Chickahominy River) has good benthic community based on the results from the Chesapeake Bay Benthic Index of Biological Community; therefore the James River from the fall line to the oligohaline boundary was considered impaired solely for Nutrients/Eutrophication Biological Indicators (EPA Overlist). During the 2006 cycle, the CB water quality standards were implemented. The Upper Tidal Freshwater James River from the fall line to the Appomattox failed the Shallow Water Use SAV criteria. The 30-day Open Water dissolved oxygen criteria were acceptable, but there was insufficient information to assess the other OW criteria or the Migratory Spawning Use.

Wet Weather Discharges (Point Source and Combination of Stormwater, SSO or CSO)

Shallow-Water Submerged Aquatic Vegetation	**Aquatic Plants (Macrophytes)**	00442	**2006**	**2010**	VAP-G03E-02 The James River from the Appomattox River to the Chickahominy River was originally listed on the 1998 list as fully supporting but threatened of the Aquatic Life Use goal based on chlorophyll a violations. During the 1998 cycle, EPA extended the segment upstream to the fall line and downgraded the river to not supporting the Aquatic Life Use, citing nutrient concerns. In previous cycles, the mainstem James River had acceptable dissolved oxygen levels and the segment was considered impaired solely for Nutrients/Eutrophication Biological Indicators (EPA Overlist). During the 2006 cycle, the CB water quality standards were implemented. The Oligohaline James River failed the Shallow Water Use SAV acreage requirements. It also failed the 30-day Open Water summer dissolved oxygen criteria.

Use	Impairment	4.71 SQUARE MILES	TMDL Group ID	First Listed on 303(d)	TMDL Schedule	Impairment Specific Comments and/or Impairment Specific VA Category
Aquatic Life	**Aquatic Plants (Macrophytes)**		00442	**2006**	**2010**	VAP-G03E-02

In the 2004 cycle, the James River from Brandon Point downstream to the Chickahominy River confluence was assessed as impaired of the Aquatic Life Use and Wildlife Uses due to chloride violations (see 2004 fact sheet VAP-G03E-02.) The chloride TMDL is due in 2016. In the 2006 cycle, the segment remained impaired.

The James River from the Appomattox River to the Chickahominy River was originally listed on the 1998 list as fully supporting but threatened of the Aquatic Life Use goal based on chlorophyll a violations. During the 1998 cycle, EPA extended the segment upstream to the fall line and downgraded the river to not supporting the Aquatic Life Use, citing nutrient concerns.

In previous cycles, the mainstem James River had acceptable dissolved oxygen levels. In addition the entire tidal freshwater portion (fall line to just above the Chickahominy River) has good benthic community based on the results from the Chesapeake Bay Benthic Index of Biological Community; therefore the James River from the fall line to the oligohaline boundary was considered impaired solely for Nutrients/Eutrophication Biological Indicators (EPA Overlist).

During the 2006 cycle, the CB water quality standards were implemented. The Lower Tidal Freshwater James River failed the Shallow Water Use SAV acreage requirements. However, it also failed the 30-day Open Water summer dissolved oxygen criteria.

Aquatic Life	**Benthic-Macroinvertebrate Bioassessments (Streams)**		00453	**1996**	**2010**	VAP-H39R-09

The James River was assessed not supporting of the Aquatic Life use support goal based on the results of biological (benthic) monitoring at station 2-JMS110.34 and 2-JMS110.44, which indicated moderately impaired benthic communities when compared to the control station at 2-JMS115.29. Acanthamoeba (an amoebae that inhabits lesions in fish and has a remote chance of having human health effects) was detected in lesions in fish taken from the James River near Mayo Bridge in September 1997.

In addition, stations 2-HMS112.37 and 2-JMS111.48 had exceedances of the dissolved oxygen violation rate. The DO TMDL is due in 2014.

Recreation	**Escherichia coli**		00455	**2006**	**2014**	VAP-H39R-08

The James River has been assessed not supporting of the Recreation use support goal based on the results of a summer special study in the fall zone. The special study was designed to monitor the effects of summertime rain and combined sewer overflow (CSO) events on water quality in the James River and to monitor the effects of Richmond's CSO abatement efforts. The special study data used representative conditions before completion of CSO abatement projects.

The segment was extended upstream from the 1998 cycle during the 2002 assessment. The TMDL for the original portion (Boulevard Bridge to Fall Line) is due in 2010, but the TMDL for the upstream portion is not due until 2014. During the 2006 cycle, the area above Boulevard Bridge was assessed based on 2-JMS115.29. The station had an acceptable E. coli instantaneous violation rate of 0/16, however there was a violation of the monthly geometric mean in July 2003. Typically, one violation would result in an assessment of fully supporting with observed effects, however since the area was previously impaired, the segment should not be delisted.

VA Overall AU Category: **5A**

Use	Impairment	22.87 MILES	TMDL Group ID	First Listed on 303(d)	TMDL Schedule	Impairment Specific Comments and/or Impairment Specific VA Category
Recreation	**Fecal Coliform**		01173	**2004**	**2016**	VAP-H33R-01

This segment was assessed as not supporting of the Recreation Use based on a fecal coliform violation rate of 4/35 at the Route 45 bridge (2-JMS157.28) during the 2004 cycle. Although the violation rate during the 2006 cycle is acceptable (1/13), there has been no bacteria monitoring at this site since 2001, therefore the fecal impairment is carried over.

Aquatic Life	**Oxygen, Dissolved**		01187	**2002**	**2014**	VAP-H39R-09

The James River was assessed not supporting of the Aquatic Life use support goal based on the results of biological (benthic) monitoring at station 2-JMS110.34 and 2-JMS110.44, which indicated moderately impaired benthic communities when compared to the control station at 2-JMS115.29. Acanthamoeba (an amoebae that inhabits lesions in fish and has a remote chance of having human health effects) was detected in lesions in fish taken from the James River near Mayo Bridge in September 1997.

In addition, stations 2-HMS112.37 and 2-JMS111.48 had exceedances of the dissolved oxygen violation rate. The DO TMDL is due in 2014.

James River Basin

TMDL Watershed Name: **James River and Johnson Creek**

TMDL Group ID: **01144**

VAP-G04E_JMS02A02 **James River** CHARLES CITY CO, SURRY CO

The James River from the tidal freshwater/oligohaline boundary at river mile 52.08 to the limit of the watershed at river mile 48.40.

JMSOH

VA Overall AU Category: **5A**

Use	Impairment	9.20 SQUARE MILES	TMDL Group ID	First Listed on 303(d)	TMDL Schedule	Impairment Specific Comments and/or Impairment Specific VA Category
Aquatic Life	**Chloride**		01144	**2004**	**2016**	VAP-G04E-01 In the 2004 cycle, the James River from Brandon Point downstream to the Chickahominy River confluence was assessed as impaired of the Aquatic Life Use and Wildlife Uses due to chloride violations (see 2004 fact sheet VAP-G03E-02.) The chloride TMDL is due in 2016. In the 2006 cycle, the segment remained impaired.
		Sources: Natural Conditions - Water Quality Standards Use Attainability Analyses Needed				
Wildlife	**Chloride**		01144	**2004**	**2016**	VAP-G04E-01 In the 2004 cycle, the James River from Brandon Point downstream to the Chickahominy River confluence was assessed as impaired of the Aquatic Life Use and Wildlife Uses due to chloride violations (see 2004 fact sheet VAP-G03E-02.) The chloride TMDL is due in 2016. In the 2006 cycle, the segment remained impaired.

Recreation	**Fecal Coliform**		00341	**2002**	**2014**	VAP-G08R-01

Morris Creek was assessed in 2004 as not supporting of the Recreation use support goal based on a fecal coliform violation rate of 3/20 recorded at 2-MOC005.97. The segment was listed as threatened in 1998, and then downgraded to impaired during the 2002 cycle, therefore the TMDL is due in 2014. There has been no additional monitoring at this station since 2001, therefore the segment remains impaired although there are no fecal coliform violations during the assessment window. Further monitoring is recommended.

Aquatic Life	**Oxygen, Dissolved**		10040	**2006**	**2018**	VAP-G06R-08

The Natural Conditions Assessment for low pH in White Oak Swamp was completed during the 2006 cycle and recommends that White Oak Swamp and its tributaries be reclassified as Class VII swampwaters. Until the standards can be revised, the watershed will be considered Cat. 4C for pH.

During the 2006 cycle, the segment was also considered impaired of the Aquatic Life Use due to a dissolved oxygen violation rate of 6/15 at 2-WOS008.15. Although natural conditions are also suspected, the report only addressed pH, therefore the segment will be classified as Category 5C. The TMDL is due in 2018.

Recreation	**Fecal Coliform**		01097	**2002**	**2014**	VAP-E26E-27 (see 2004 fact sheet VAP-E26R-01) The segment was initially assessed in 1998 as fully supporting but threatened of the Recreation Use based on violations of the fecal coliform standard at monitoring station 3-BLD000.58, located at the Route 3 bridge. During the year 2002 cycle, the segment was downgraded to impaired. During the 2004 cycle, the segment continued to be impaired (see 2004 fact sheet VAP-E26R-01). However, in the 2006 cycle, it was determined that the station is tidally influenced and had been mistakenly considered riverine. The station remains impaired for fecal coliform. The fact sheet and AU were renamed. The TMDL is due in 2014.

Recreation	**Enterococcus**		10083	**2006**	**2018**	VAP-E26E-20

Broad Creek was considered fully supporting but threatened of the Recreation Use in 1998 due to BPJ (6 dischargers into embayment), but there were acceptable FC violation rates at station 3-BRD000.62 in both the 2002 and 2004 cycles, so it was dropped in 2004. In the 2006 cycle, the fecal coliform violation rate remained acceptable (0/23), however the enterococci violation rate failed (2/9), therefore the segment is considered impaired of the Recreation Use. The TMDL is due in 2018.

Recreation	**Enterococcus**		10083	**2006**	**2018**	VAP-E26E-20

Broad Creek was considered fully supporting but threatened of the Recreation Use in 1998 due to BPJ (6 dischargers into embayment), but there were acceptable FC violation rates at station 3-BRD000.62 in both the 2002 and 2004 cycles, so it was dropped in 2004. In the 2006 cycle, the fecal coliform violation rate remained acceptable (0/23), however the enterococci violation rate failed (2/9), therefore the segment is considered impaired of the Recreation Use. The TMDL is due in 2018.

Aquatic Life	**Oxygen, Dissolved**		01074	**2002**	**2010**	VAP-E26E-25 The Corrotoman River was included in EPA's 1998 Overlist. The segment was previously called impaired solely on EPA's overlist (nutrients/eutrophication biological indicators). The new Chesapeake Bay water quality standards were implemented during the 2006 cycle. The mesohaline Corrotoman failed the open water summer dissolved oxygen criteria. The TMDL is due in 2010. During the 2006 cycle, monitoring was conducted at Coastal 2000 station 3-CRR000.58. The weight of evidence approach was utilized and the station was considered impaired because of sparse benthos. There was no toxicity or chemical contamination observed, therefore the approach considered the cause to be water quality.

VA Overall AU Category: **5A**

Use	Impairment	1.19 MILES	TMDL Group ID	First Listed on 303(d)	TMDL Schedule	Impairment Specific Comments and/or Impairment Specific VA Category
Recreation	**Fecal Coliform**		01048	**2004**	**2016**	VAP-E23R-06

The segment was assessed as not supporting of the Recreation Use during the year 2004 cycle based on a fecal coliform violation rate of 4/35 at the Route 716 bridge (3-MTL004.82). During the 2006 cycle, the violation rate for FC was 0/15 and for E. coli was 1/9. Although the FC violation rate is acceptable, there has been no additional FC monitoring since 2002 and the recent E. coli monitoring is not sufficient for delisting. Therefore the segment must remain impaired based on the previous assessment until additional E. coli monitoring can be conducted.

Aquatic Life	**Oxygen, Dissolved**		10111	**2006**	**2018**	VAP-E22R-03 Since 2002, Occupacia Creek from the Hunters Millpond dam downstream to the tidal limit has been assessed as not supporting for the Aquatic Life Use based on pH violations at 3-OCC010.47. During the 2006 cycle, a Natural Conditions Assessment for low pH in Occupacia Creek was performed. The report recommends that the tidal Occupacia Creek watershed above the fall line (including Black Water Creek and its tribs) be reclassified as Class VII swampwaters. Until the reclassification, the watershed will be considered Cat. 4C for pH. The segment also shows impairment for dissolved oxygen. Although the low DO is believed to be caused by natural low-slope conditions, the segment is assessed as Cat. 5C.

Aquatic Life	**Oxygen, Dissolved**		01776	**2004**	**2010**	VAP-E22E-01 The mainstem of the Rappahannock River from Myrtle Swamp to its mouth was originally listed in 1998 by DEQ due to dissolved oxygen violations and nutrient overenrichment. The EPA extended the segment upstream to the confluence with Totuskey Creek . In the 2004 cycle dissolved oxygen violations were noted in deepwater and deep channel stations downstream of the confluence with Lancaster Creek (Morattico), which is further downstream. The CB standards were implemented during the 2006 cycle. The mesohaline portion of the Rappahannock failed the open water summer dissolved oxygen criteria and the SAV acreage standards during the 2006 cycle. Also, applicable areas failed the deep water and deep channel applicable dissolved oxygen criteria in 2006. In addition, in 2004 the mesohaline portion of the mainstem Rappahannock indicated benthic impairment based on the Chesapeake Bay Benthic Index of Biological Integrity. The impairment was attributed to low oxygen. The mainstem remains impaired in the 2006 cycle.

Wet Weather Discharges (Point Source and Combination of Stormwater, SSO or CSO)

Open-Water Aquatic Life	**Oxygen, Dissolved**		01776	**2004**	**2010**	VAP-E22E-01 The mainstem of the Rappahannock River from Myrtle Swamp to its mouth was originally listed in 1998 by DEQ due to dissolved oxygen violations and nutrient overenrichment. The EPA extended the segment upstream to the confluence with Totuskey Creek. In the 2004 cycle dissolved oxygen violations were noted in deepwater and deep channel stations downstream of the confluence with Lancaster Creek (Morattico), which is further downstream. The CB standards were implemented during the 2006 cycle. The mesohaline portion of the Rappahannock failed the open water summer dissolved oxygen criteria and the SAV acreage standards during the 2006 cycle.

Aquatic Life	**Oxygen, Dissolved**		01776	**1998**	**2010**	VAP-E22E-01 The mainstem of the Rappahannock River from Myrtle Swamp to its mouth was originally listed in 1998 by DEQ due to dissolved oxygen violations and nutrient overenrichment. The EPA extended the segment upstream to the confluence with Totuskey Creek. In the 2004 cycle dissolved oxygen violations were noted in deepwater and deep channel stations downstream of the confluence with Lancaster Creek (Morattico), which is further downstream. The CB standards were implemented during the 2006 cycle. The mesohaline portion of the Rappahannock failed the open water summer dissolved oxygen criteria and the SAV acreage standards during the 2006 cycle. Also, applicable areas failed the deep water and deep channel applicable dissolved oxygen criteria in 2006. In addition, in 2004 the mesohaline portion of the mainstem Rappahannock indicated benthic impairment based on the Chesapeake Bay Benthic Index of Biological Integrity. The impairment was attributed to low oxygen. The mainstem remains impaired in the 2006 cycle.

Aquatic Life	**Oxygen, Dissolved**		01776	**1998**	**2010**	VAP-E22E-01

The mainstem of the Rappahannock River from Myrtle Swamp to its mouth was originally listed in 1998 by DEQ due to dissolved oxygen violations and nutrient overenrichment. The EPA extended the segment upstream to the confluence with Totuskey Creek. In the 2004 cycle dissolved oxygen violations were noted in deepwater and deep channel stations downstream of the confluence with Lancaster Creek (Morattico), which is further downstream.

The CB standards were implemented during the 2006 cycle. The mesohaline portion of the Rappahannock failed the open water summer dissolved oxygen criteria and the SAV acreage standards during the 2006 cycle.

In addition, in 2004 the mesohaline portion of the mainstem Rappahannock indicated benthic impairment based on the Chesapeake Bay Benthic Index of Biological Integrity. The impairment was attributed to low oxygen. The mainstem remains impaired in the 2006 cycle.

- Agriculture
- Atmospheric Deposition - Nitrogen
- Clean Sediments
- Industrial Point Source Discharge
- Internal Nutrient Recycling
- Loss of Riparian Habitat
- Municipal Point Source Discharges
- Sediment Resuspension (Clean Sediment)
- Sources Outside State Jurisdiction or Borders
- Wet Weather Discharges (Point Source and Combination of Stormwater, SSO or CSO)

Appendix A - List of Impaired (Category 5) Waters in 2006*

Assessment Unit ID	Waterbody Name	City / County	Assessment Unit Description

Rappahannock River Basin

TMDL Watershed Name: **Rappahannock River Mesohaline Embayments**

TMDL Group ID: **10071**

VAP-E25E_GEE01A98	**Greenvale Creek**	LANCASTER CO	The segment boundaries are delineated in VDH shellfish condemnation 094A, 2/5/2003. RPPMH

VA Overall AU Category: **5A**

Use	Impairment	0.08 SQUARE MILES	TMDL Group ID	First Listed on 303(d)	TMDL Schedule	Impairment Specific Comments and/or Impairment Specific VA Category
Aquatic Life	**Aquatic Plants (Macrophytes)**		10071	**2006**	**2010**	VAP-E22E-01 The mesohaline portion of the Rappahannock failed the SAV acreage standards during the 2006 cycle.

Sources:
- Agriculture
- Atmospheric Deposition - Nitrogen
- Clean Sediments
- Industrial Point Source Discharge
- Internal Nutrient Recycling
- Loss of Riparian Habitat
- Municipal Point Source Discharges
- Sediment Resuspension (Clean Sediment)
- Sources Outside State Jurisdiction or Borders
- Wet Weather Discharges (Point Source and Combination of Stormwater, SSO or CSO)

Shallow-Water Submerged Aquatic Vegetation	**Aquatic Plants (Macrophytes)**		10071	**2006**	**2010**	VAP-E22E-01 The mesohaline portion of the Rappahannock failed the SAV acreage standards during the 2006 cycle.

Sources:
- Agriculture
- Atmospheric Deposition - Nitrogen
- Clean Sediments
- Industrial Point Source Discharge
- Internal Nutrient Recycling
- Loss of Riparian Habitat
- Municipal Point Source Discharges
- Sediment Resuspension (Clean Sediment)
- Sources Outside State Jurisdiction or Borders
- Wet Weather Discharges (Point Source and Combination of Stormwater, SSO or CSO)
