TMDL Watershed Name: **Rappahannock River, Tidal Fresh**

TMDL Group ID: **60138**

VAN-E21E_RPP04A02 **Rappahannock River** CAROLINE CO, KING GEORGE CO

Segment begins at the confluence with Ware Creek and continues downstream until the confluence with Mount Creek. Portion of CBP segment RPPTF.

VA Overall AU Category: **5A**

Use	Impairment	1.20 SQUARE MILES	TMDL Group ID	First Listed on 303(d)	TMDL Schedule	Impairment Specific Comments and/or Impairment Specific VA Category
Fish Consumption	**PCB in Fish Tissue**		60138	**2004**	**2016**	The fish consumption use is categorized as impaired due to a Virginia Department of Health, Division of Health Hazards Control, PCB fish consumption advisory. The advisory, dated 12/13/04, limits American eel, blue catfish, carp, channel catfish, croaker, gizzard shad, and anadromous (coastal) striped bass consumption to no more than two meals per month. The affected area extends from the I-95 bridge above Fredericksburg downstream to the mouth of the river near Stingray Point, including its tributaries Hazel Run up to the I-95 bridge crossing and Claiborne Run up to the Route One bridge crossing. Exceedances of the water quality criterion based tissue value (TV) of 54 parts per billion (ppb) for polychlorinated biphenyls (PCBs) in fish tissue were recorded in two species of fish samples collected in 2001 at monitoring station 3-RPP080.19 (blue catfish and gizzard shad).

Sources: Source Unknown

VAN-E21E_RPP05A02 **Rappahannock River** CAROLINE CO, STAFFORD CO

Segment begins at the confluence with Massaponax Creek and continues downstream until the confluence with Ware Creek. The upper reach of this segment (approx. 0.3 sq mi) extends into waterbody VAN-E20E. Portion of CBP segment RPPTF.

Recreation	**Fecal Coliform**		00197	**1998**	**2014**	Category 4A VAP-E25E-02 In 2002, the segment was also assessed as not supporting the Recreation Use due to fecal coliform violations at the end of Route 680 (3-ROS001.35). The violation rate in the 2004 cycle was 4/20. There has been no additional monitoring since 2001. The fecal coliform criteria for Shellfish is more stringent, therefore the impairment is considered to be addressed by the existing shellfish TMDL (cat. 4A)

Use	Impairment	2.92 MILES	TMDL Group ID	First Listed on 303(d)	TMDL Schedule	Impairment Specific Comments and/or Impairment Specific VA Category
Recreation	**Escherichia coli**		00214	**2006**	**2005**	Sufficient exceedances of the instantaneous E.coli bacteria criterion (6 of 15 samples - 40.0%) were recorded at DEQ's ambient water quality monitoring station (3-ROB024.06) at the Route 649 bridge to assess this stream segment as not supporting of the recreation use goal for the 2006 water quality assessment. A bacteria TMDL for the Robinson River watershed was submitted to the U.S. EPA and approved December 12, 2005. Nonpoint sources of fecal coliform are primarily agricultural (i.e., land-applied animal waste, manure deposited directly on pastures by livestock, and a significant fecal coliform load due to cattle directly depositing manure in streams) with a significant load applied to residential and forest land use categories. Non-agricultural anthropogenic nonpoint sources of fecal coliform loadings include straight pipes, failing septic systems, and pet waste. Wildlife contributes to fecal coliform loadings on all land uses, according to the acceptable habitat range for each species. Segment listed as Category 4A - Federal ID NA.

Recreation	**Fecal Coliform**		00498	**2002**	**2010**	VAP-K29R-01

In 1998, the entire mainstem of Assamoosick Swamp (23.8 miles) was assessed fully supporting but threatened of the Recreation Use. The segment was later identified to Virginia for listing consideration (station 5AASM013.36). The segment was downgraded in 2002, therefore the TMDL is due in 2010. In 2002 Black Swamp, Seacorrie Swamp, XDW, and XDX were also considered impaired of the Recreation Use. These TMDLs are due in 2014. In 2004, German Swamp was added to the impairment. This TMDL is due in 2016. During the 2006 cycle, several E. coli impairments were added in the watershed; these bacteria impairments have the same TMDL due date as the original FC impairments.

Note: the fecal coliform impairment of Assamoosick Swamp was shortened in the year 2002 cycle to end at the Route 607 bridge. There continues to be acceptable fecal coliform levels in this downstream portion (0/3 at 5AASM003.00, 0/13 at 5AASM000.89).

Aquatic Life	**Oxygen, Dissolved**		00680	**2002**	**2010**	VAP-K11R-02 In 1998, Fontaine Creek from Beaverdam Creek to its mouth at the Meherrin River was assessed not supporting of the Aquatic Life use support goal because of dissolved oxygen violations. All tributaries entering this segment were considered fully supporting but threatened. The DO TMDL for the mainstem is due in 2010. During the year 2002 cycle, pH was added as an impairing cause and the tributaries were added to the segment. The TMDL is due in 2014. During the year 2006 cycle, the segment was reassessed against the new Class VII swampwater criteria. The segment continues to show dissolved oxygen violations, but the segment conforms with the new pH criteria. The segment should be delisted for pH. The segment will be considered Category 4C for dissolved oxygen until the new criteria can be developed.

Recreation	**Fecal Coliform**		01322	**2002**	**2014**	VAP-K11R-01

The segment was assessed as not supporting of the Recreation and Aquatic Life use goals based on the following violation rates in 2004:

Fecal coliform 4/24 at the Rt. 639 bridge (5AFON025.64)
Fecal coliform 3/18 at the Rt. 627 bridge (5AFON027.33)
Dissolved oxygen 3/16 at 5AFON027.33

These stations were confined animal feeding operation (CAFO) special study stations and ceased in 2002.

During the 2006 cycle, the stations remain impaired for fecal coliform.

Sources: Source Unknown

Recreation	**Fecal Coliform**		01746	**2004**	**2016**	VAP-K06R-02

During the year 2006 cycle, the bacteria impairments (VAP-K06R-01, -02, and -03) in Great Creek were combined. The segment has been assessed as not supporting of the Recreation Use goal based on fecal coliform violations at 5AXEA000.04, 5A-PL-GR-A, and 5AGTC005.40, and E. coli violations at 5AGTC017.75.

5AXEA000.04 and 5A-PL-GR-A are confined animal feeding operation (CAFO) special study stations that were discontinued in 2002, therefore the 2004 violation rate was applied.

Use	Impairment	16.55 MILES	TMDL Group ID	First Listed on 303(d)	TMDL Schedule	Impairment Specific Comments and/or Impairment Specific VA Category
Aquatic Life	**pH**		01354	**2004**	**2016**	VAP-K24R-01

Hunting Quarter Swamp had been assessed as fully supporting but threatened of the Aquatic Life Use since the 1998 cycle based on best professional judgment. Because of its hydrological characteristics, Hunting Quarter Swamp was believed to be subject to the same dissolved oxygen and pH characteristics as other swampwaters assessed as less than fully supporting of its use support goal.

Sampling in the 2004 cycle confirmed the pH violations (2/2), therefore the segment was downgraded to impaired. Although the DO violation rate was acceptable (0/2), the samples were taken in the winter months and therefore dissolved oxygen was still added as an impairing cause based on BPJ.

However, during the 2006 cycle, additional monitoring was conducted. This confirmed the pH violations (5/5), but the DO violation rate was acceptable (0/5). The segment should be delisted for dissolved oxygen.

Aquatic Life	**Oxygen, Dissolved**	4.38 MILES	00478	**1998**	**2010**	VAP-K23R-01

The entire Rowanty Creek watershed has previously been assessed not supporting of the Aquatic Life use support goal based on DO and pH violations at 5AHRA010.94, 5AROW013.14, and 5AROW002.41 and DO, pH violations in 1994 at 5APCT001.23, 5AGRV006.00. 5AGRV004.35, 5AHRA010.94, 5AHRA003.42, 5AHRA002.92, 5AATH003.28, 5ALCC000.54, 5AROW008.64, and 5AROW004.72.

During the 2006 cycle, the lower portion of the Rowanty Creek watershed below Gravelly Run was reclassified as Class VII swampwaters. That segment is now in conformance with the pH and DO standards and will be delisted. However, the upper Class III portion still has pH and DO violations at 5AATH003.28 (3/4, 3/4) and 5AHRA010.94 (4/12, 4/13) and will remain impaired.

Sources: Natural Conditions - Water Quality Standards Use Attainability Analyses Needed

VAP-K23R_ROW01A98 **Rowanty Creek and Tributaries** DINWIDDIE CO Rowanty Creek watershed above Gravelly Run, excluding Hatcher Run from its headwaters to the pond below Rt. 627. Segment split in 2006 and VAP-K23R_ROW03A06 was added.

Aquatic Life	**Oxygen, Dissolved**		01335	**2002**	**2014**	VAP-K17R-02

In 2004, the segment was assessed not supporting of the Aquatic Life Use and Recreation Use goals based on the following violations:
pH 7/17 at 5AWAQ020.52 (Route 617);
DO 2/11, pH 10/11 at 5AWAQ022.17;
Fecal coliform 5/19 at 5AWAQ020.52 and 2/10 at 5AWAQ022.17.

These stations were confined animal feeding operation (CAFO) special study stations.

There has been no additional monitoring since 2002, so the 2004 assessment is carried over.

Recreation	**Fecal Coliform**		01367	**2002**	**2014**	VAP-K31R-01

In the 1998 cycle, Warwick Swamp from its headwaters to the Route 627 bridge was assessed fully supporting but threatened of the Recreation use. During the year 2002 cycle, the entire mainstems of Warwick Swamp and Blackwater Swamp were considered impaired of the Recreation use. Due to an acceptable fecal coliform violation rate at 5AWKS001.00, the Warwick Swamp segment was shortened to its original length in 2004. During the 2006 cycle, there was no additional monitoring at 5AWKS009.11, therefore the impairment is carried over. The fecal coliform TMDL is due in 2014.

VA Overall AU Category: **5A**

Use	Impairment	0.44 SQUARE MILES	TMDL Group ID	First Listed on 303(d)	TMDL Schedule	Impairment Specific Comments and/or Impairment Specific VA Category
Aquatic Life	**Oxygen, Dissolved**		01766	**2006**	**2010**	01766 (DO) VAP-A34E-27 During the 2006 cycle, the revised Chesapeake Bay water quality standards were adopted. These criteria are based on segment-wide dissolved oxygen and submerged aquatic vegetation criteria. In addition, the mainstem portion of the Chesapeake Bay within CB5MH had been previously assessed by DEQ as impaired for dissolved oxygen. During the 2006 cycle, the 30-day mean dissolved oxygen was acceptable, however there was insufficient data available to assess the other open water criteria, therefore the mainstem could not be delisted. Because the new standards are based on segment-wide dissolved oxygen, the coastal tributaries were also considered impaired for dissolved oxygen until such time as the remaining open water criteria can be assessed.

During the 2006 cycle, the 30-day mean dissolved oxygen was acceptable, however there was insufficient data available to assess the other open water criteria, therefore the mainstem could not be delisted. Because the new standards are based on segment-wide dissolved oxygen, the coastal tributaries were also considered impaired for dissolved oxygen until such time as the remaining open water criteria can be assessed.

These criteria are based on segment-wide dissolved oxygen and submerged aquatic vegetation criteria. In addition, the mainstem portion of the Chesapeake Bay within CB5MH had been previously assessed by DEQ as impaired for dissolved oxygen. During the 2006 cycle, the 30-day mean dissolved oxygen was acceptable, however there was insufficient data available to assess the other open water criteria, therefore the mainstem could not be delisted. Because the new standards are based on segment-wide dissolved oxygen, the coastal tributaries were also considered impaired for dissolved oxygen until such time as the remaining open water criteria can be assessed.

Aquatic Life	**Oxygen, Dissolved**		01766	**2006**	**2010**	01766 (DO) VAP-A34E-27 During the 2006 cycle, the revised Chesapeake Bay water quality standards were adopted. These criteria are based on segment-wide dissolved oxygen and submerged aquatic vegetation criteria. In addition, the mainstem portion of the Chesapeake Bay within CB5MH had been previously assessed by DEQ as impaired for dissolved oxygen. During the 2006 cycle, the 30-day mean dissolved oxygen was acceptable, however there was insufficient data available to assess the other open water criteria, therefore the mainstem could not be delisted. Because the new standards are based on segment-wide dissolved oxygen, the coastal tributaries were also considered impaired for dissolved oxygen until such time as the remaining open water criteria can be assessed.

Aquatic Life	**Oxygen, Dissolved**		01766	**2002**	**2010**	01766 (DO) VAP-A34E-27 (2004 VAP-C01E-23) In 2002, this segment was listed as not supporting for DO based on the bottom deep water criteria. During the 2006 cycle, the revised Chesapeake Bay water quality standards were adopted. These criteria are based on segment-wide dissolved oxygen and submerged aquatic vegetation criteria. The segment also failed the applicable dissolved oxygen criteria for deep water and deep channel. This includes the isolated areas of the tributaries which are classified as deep water or deep channel. In addition, the mainstem portion of the Chesapeake Bay within CB5MH had been previously assessed by DEQ as impaired for dissolved oxygen. During the 2006 cycle, the 30-day mean dissolved oxygen was acceptable, however there was insufficient data available to assess the other open water criteria, therefore the mainstem could not be delisted. Because the new standards are based on segment-wide dissolved oxygen, the coastal tributaries were also considered impaired for dissolved oxygen until such time as the remaining open water criteria can be assessed.

Aquatic Life	**Oxygen, Dissolved**		01766	**2006**	**2010**	01766 (DO) VAP-A34E-27 During the 2006 cycle, the revised Chesapeake Bay water quality standards were adopted. These criteria are based on segment-wide dissolved oxygen and submerged aquatic vegetation criteria. The segment also failed the applicable dissolved oxygen criteria for deep water and deep channel. This includes the isolated areas of the tributaries which are classified as deep water or deep channel. In addition, the mainstem portion of the Chesapeake Bay within CB5MH had been previously assessed by DEQ as impaired for dissolved oxygen. During the 2006 cycle, the 30-day mean dissolved oxygen was acceptable, however there was insufficient data available to assess the other open water criteria, therefore the mainstem could not be delisted. Because the new standards are based on segment-wide dissolved oxygen, the coastal tributaries were also considered impaired for dissolved oxygen until such time as the remaining open water criteria can be assessed.

TMDL Watershed Name: **Lake Smith (Lower), (PWS Reservoir)**

TMDL Group ID: **01444**

VAT-C08L_LAS02A02	Lake Smith - Lower (PWS)	NORFOLK CITY VIRGINIA BEACH CITY	East of Norfolk Municipal Airport, south of Little Creek Reservoir. Begins above Norfolk SM1 station (approx RM 0.15) south of two branches near Rt 13 and ends at lake terminus south of Route 13 (RM 0.0). City of Norfolk PWS.

VA Overall AU Category: **5A**

Use	Impairment	56.00 ACRES	TMDL Group ID	First Listed on 303(d)	TMDL Schedule	Impairment Specific Comments and/or Impairment Specific VA Category
Aquatic Life	**Oxygen, Dissolved**		01444	**2004**	**2014**	The Aquatic Life Use impairment is retained from the 2002 303d listing, due to dissolved oxygen concentration measurements (3 violates / 15 observations) below the minimum criteria (4.0 mg/L) within the observations at the City of Norfolk's SM1 station sampled during the current cycle. The Aquatic Life impairment is based on dissolved oxygen concentration measurements (3 violates / 15 observations) below the minimum criteria (4.0 mg/L) within the observations at the City of Norfolk's SM1 station. Segment originally listed impaired in 2002 IR due to DEQ station data @ 7-LAS000.06. Data at this DEQ station for 2006 IR showed use support (1 violate / 16 observations). However, the Aquatic Life Use impairment is retained from the 2002 303d listing, due to dissolved oxygen concentration measurements (3 violates / 15 observations) below the minimum criteria (4.0 mg/L) within the observations at the City of Norfolk's SM1 station sampled during the current cycle. With data reported from the station which was the basis for the impairment listing in 2002 IR (DEQ station data @ 7-LAS000.06) showing use support (1 violate / 16 observations) one violation from indicating impairment, there is insufficient data to recommend de-listing the previous impairment. This lake is non-stratified. The TSI evaluation is based on the DEQ station data due to the lack of parameter data at the City of Norfolk's SM1 station. The chlorophyll a (73), TP (79) and Secchi (70) TSIs exceeded the target value of 60, indicating anthropogenic (pollution) causes for the impairment.

Fish Consumption	**PCB in Fish Tissue**		15000	**2006**	**2018**	VAP-C01E-17

The Chesapeake Bay and its small coastal tidal tributaries are included under the 12/13/2004 VDH Fish Consumption Advisories for PCBs. No more than two meals/month are recommended of anadromous (coastal) striped bass.

Also, VDH issued an additional separate fish consumption advisory on 12/13/2004 for PCBs in the Mobjack Bay and its tributaries, particularly the East, West, and Ware Rivers. No more than two meals/month of gizzard shad are recommended.

VA Overall AU Category: **5A**

Use	Impairment	1.65 MILES	TMDL Group ID	First Listed on 303(d)	TMDL Schedule	Impairment Specific Comments and/or Impairment Specific VA Category
Recreation	**Fecal Coliform**		00425	**2004**	**2010**	The Recreatiion Use impairment previously reported is retained because monitoring for the current data cycle exhibits Observed Effects based on insufficient exceedances of the criteria for Fecal Coliform bacteria in a small dataset (1 violates / 9 obs.), and are insufficent to confirm improvement. Although nine observations for Fecal Coliform bacteria are reported during this data period, results do not confirm a reduction in bacteria levels (1 violates / 9 obs.), and there are insufficient number of obs. for Ecoli (0 violates / 4 obs.) to replace the previous Fecal Coliform bacteria criteria. The previous impairment assessment (indicating elevated levels of Fecal Coliform bacteria for the 1996 303d report) is retained resulting in an impaired assessment. Assessment is retained until sufficient data for re-evaluation is acquired.

Assessment Unit ID	Waterbody Name	City / County	Assessment Unit Description
VAT-F27E_KNG01A02	**King Creek - Upper**	YORK CO	South shore of York River. East of Pennimon Spit, within Naval Weapons Station facility. Headwaters area of creek downstream to RM 0.50. Portion of VDH-DSS condemnation 051-035C, 10/7/2004 YRKPH

VA Overall AU Category: **5A**

Use	Impairment	0.19 SQUARE MILES	TMDL Group ID	First Listed on 303(d)	TMDL Schedule	Impairment Specific Comments and/or Impairment Specific VA Category
Recreation	**Enterococcus**		00331	**2006**	**2010**	VAT-F27E-05 Sufficient exceedances of Virginia's water quality standards for Fecal Coliform Bacteria were recorded at DEQ's ambient water quality monitoring station on King Cr. to assess this segment as not supporting of the Clean Water Act's Recreation Use Support Goal for the 2002 305(b) report. The cause of the standard exceedances was considered unknown. During the year 2006 cycle, the segment remained impaired of the Recreation Use due to an enterococci violation rate of 6/14 at 8-KNG004.46. The impairment was converted from fecal coliform to enterococci, however the original TMDL due date was maintained.

Use	Impairment	0.16 SQUARE MILES	TMDL Group ID	First Listed on 303(d)	TMDL Schedule	Impairment Specific Comments and/or Impairment Specific VA Category
Aquatic Life	**Oxygen, Dissolved**		00440	**2006**	**2010**	VAP-F23E-03 The Chesapeake Bay and its tidal tributaries were added by EPA to the 1998 303(d) list. This included the entire tidal portion of the Mattaponi River. EPA listed the impairment as dissolved oxygen violations caused by nutrient overenrichment. During the 2002 cycle, dissolved oxygen and chlorophyll A violation rates at multiple monitoring stations were all acceptable (see below). Since the listing was based solely on the EPA overlist, the impairment has been considered Nutrients/Eutrophication Biological Indicators. However, during the 2006 cycle, the Chesapeake Bay water quality standards were implemented. The tidal freshwater Mattaponi failed the default CB 30-day open water summer criteria of 5.5 mg/L. Water quality standards specific for the Pamunkey and Mattaponi Rivers were adopted after the close of the assessment period and the new criteria will be used in the 2008 cycle. The specific criteria recognize that dissolved oxygen is naturally depressed in the rivers due to their extensive marsh systems. The TMDL is due in 2010.

Aquatic Life	**Oxygen, Dissolved**		00440	**2006**	**2010**	VAP-F23E-03 The Chesapeake Bay and its tidal tributaries were added by EPA to the 1998 303(d) list. This included the entire tidal portion of the Mattaponi River. EPA listed the impairment as dissolved oxygen violations caused by nutrient overenrichment. During the 2002 cycle, dissolved oxygen and chlorophyll A violation rates at multiple monitoring stations were all acceptable (see below). Since the listing was based solely on the EPA overlist, the impairment has been considered Nutrients/Eutrophication Biological Indicators. During the 2006 cycle, the Chesapeake Bay water quality standards were adopted. The York Mesohaline segment, which includes the mouths of the Pamunkey and Mattaponi rivers, failed the CB 30 day open water dissolved oxygen criteria and the SAV acreage goals.

Aquatic Life	**Oxygen, Dissolved**		00440	**2006**	**2010**	VAP-F23E-03 During the 2006 cycle, the Chesapeake Bay water quality standards were implemented. The oligohaline Mattaponi failed the default CB 30-day open water summer and non-summer criteria of 5 mg/L. Water quality standards specific for the Pamunkey and Mattaponi Rivers were adopted after the close of the assessment period and the new criteria will be used in the 2008 cycle. The specific criteria recognize that dissolved oxygen is naturally depressed in the rivers due to their extensive marsh systems. The TMDL is due in 2010.

Fish Consumption	**Mercury in Fish Tissue**	4.72 MILES	10018	**2006**	**2018**	VAP-F23R-05

During the 2006 cycle, the 2003 monitoring indicated 2 exceedances of the mercury screening value (observed effect). In addition, the VDH issued a fish consumption advisory in 2004 for mercury from the Route 628 bridge downstream about 40 miles to Melrose Landing at Rt. 602. The advisory recommends that adults eat no more than 2 meals/month of largemouth bass.

Aquatic Life	**pH**		10089	**2006**	**2018**	VAP-F24E-01

The Mattaponi River from Garnetts Creek downstream to the oligohaline boundary was considered impaired of the Aquatic Life Use in 2006 based on a pH violation rate of 2/16 at 8-MPN017.45. There is only low confidence in the impairment in this segment due to an acceptable violation rate at 8-MPN017.46, however the Mattaponi River upstream of Garnetts Creek has confirmed pH violations due to natural marsh conditions. Further monitoring at this station is recommended to confirm the impairment in this portion of the Mattaponi.

VA Overall AU Category: **5A**

Use	Impairment	1.31 SQUARE MILES	TMDL Group ID	First Listed on 303(d)	TMDL Schedule	Impairment Specific Comments and/or Impairment Specific VA Category
Aquatic Life	**Oxygen, Dissolved**		01772	**1998**	**2010**	VAP-F14E-01

The tidal Pamunkey River was initially listed on the 1998 303(d) list as fully supporting but threatened of the aquatic life use goal because a 1995 special study showed river subject to 33% violation rate of daily mean DO standard during warm weather conditions May through October. The estuarine Pamunkey River is considered fully allocated relative to dissolved oxygen. New discharges cannot result in further DO depression.

The Chesapeake Bay and its tidal tributaries were added by EPA to the 1998 303(d) list. EPA listed the impairment as dissolved oxygen violations caused by nutrient overenrichment. This listing included the entire mainstem estuarine Pamunkey River.

During the year 2004 cycle, the DO violation rate was 0/47 at 8-PMK048.80, 0/48 at 8-PMK006.36, 0/213 at 8-PMK034.17, 0/48 at 8-PMK056.87, and 10/200 at 8-PMK006.36. No chlorophyll A violations were recorded.

However, during the 2006 cycle, the new Chesapeake Bay water quality standards were adopted. The oligohaline Pamunkey segment failed the default CB 30-day open water summer dissolved oxygen criteria of 5 mg/L. Water quality standards specific for the Pamunkey and Mattaponi Rivers were adopted after the close of the assessment period and the new criteria will be used in the 2008 cycle. The specific criteria recognize that dissolved oxygen is naturally depressed in the rivers due to their extensive marsh systems.

However, during the 2006 cycle, the new Chesapeake Bay water quality standards were adopted. The oligohaline Pamunkey segment failed the default CB 30-day open water summer dissolved oxygen criteria of 5 mg/L. Water quality standards specific for the Pamunkey and Mattaponi Rivers were adopted after the close of the assessment period and the new criteria will be used in the 2008 cycle. The specific criteria recognize that dissolved oxygen is naturally depressed in the rivers due to their extensive marsh systems.

During the year 2004 cycle, the DO violation rate was 0/47 at 8-PMK048.80, 0/48 at 8-PMK006.36, 0/213 at 8-PMK034.17, 0/48 at 8-PMK056.87, and 10/200 at 8-PMK006.36. No chlorophyll A violations were recorded.

However, during the 2006 cycle, the new Chesapeake Bay water quality standards were adopted. The tidal freshwater Pamunkey segment failed the default CB 30-day open water summer dissolved oxygen criteria of 5.5 mg/L. Water quality standards specific for the Pamunkey and Mattaponi Rivers were adopted after the close of the assessment period and the new criteria will be used in the 2008 cycle. The specific criteria recognize that dissolved oxygen is naturally depressed in the rivers due to their extensive marsh systems.

Aquatic Life	**Oxygen, Dissolved**		01773	**1998**	**2010**	VAP-F13E-01

The tidal Pamunkey River was initially listed on the 1998 303(d) list as fully supporting but threatened of the aquatic life use goal because a 1995 special study showed river subject to 33% violation rate of daily mean DO standard during warm weather conditions May through October. The estuarine Pamunkey River is considered fully allocated relative to dissolved oxygen. New discharges cannot result in further DO depression.

The Chesapeake Bay and its tidal tributaries were added by EPA to the 1998 303(d) list. EPA listed the impairment as dissolved oxygen violations caused by nutrient overenrichment. This listing included the entire mainstem estuarine Pamunkey River.

During the year 2004 cycle, the DO violation rate was 0/47 at 8-PMK048.80, 0/48 at 8-PMK006.36, 0/213 at 8-PMK034.17, 0/48 at 8-PMK056.87, and 10/200 at 8-PMK006.36. No chlorophyll A violations were recorded.

However, during the 2006 cycle, the new Chesapeake Bay water quality standards were adopted. The tidal freshwater Pamunkey segment failed the default CB 30-day open water summer dissolved oxygen criteria of 5.5 mg/L. Water quality standards specific for the Pamunkey and Mattaponi Rivers were adopted after the close of the assessment period and the new criteria will be used in the 2008 cycle. Assessment Unit ID	Waterbody Name	City / County	Assessment Unit Description

York River Basin

TMDL Watershed Name: **South Anna River**

TMDL Group ID: **00244**

VAP-F04R_SAR03B06	South Anna River	HANOVER CO	From the UT above Horseshoe Bridge Road to the Ashland Municipal STP discharge.

VA Overall AU Category: **5A**

Use	Impairment	8.96 MILES	TMDL Group ID	First Listed on 303(d)	TMDL Schedule	Impairment Specific Comments and/or Impairment Specific VA Category
Recreation	**Fecal Coliform**		00244	**2002**	**2014**	VAP-F04R-01 The South Anna River from Route 33 to the Ashland Municipal STP was assessed as fully supporting but threatened during the 1998 cycle. In 2002, the segment was extended upstream to Taylors Creek and downgraded to impaired. During the 2006 cycle, E. Coli monitoring was conducted at the Route 33 bridge (8-SAR021.22), as well as at new stations 8-SAR014.47 and 8-SAR012.42. Violation rates were acceptable at the upstream stations (1/12 at 8-SAR021.22 and 0/9 at 8-SAR014.47), however there were 3 violations out of 12 samples at 8-SAR012.42. Because of the fully supporting status of the upstream portion, the impaired segment has been shortened from the UT above Horseshoe Bridge Road downstream to the Ashland Municipal STP. The TMDL is due in 2014, but is currently in progress.

Sources: Source Unknown

TMDL Group ID: **00854**

VAN-F02R_SAR01A00	South Anna River	LOUISA CO	Segment begins at the confluence with Roundabout Creek and continues downstream until the confluence with Beaver Creek.

Use	Impairment	6.27 MILES	TMDL Group ID	First Listed on 303(d)	TMDL Schedule	Impairment Specific Comments and/or Impairment Specific VA Category
Recreation	**Escherichia coli**		00854	**2006**	**2016**	Sufficient exceedances of the instantaneous E.coli bacteria criterion (4 of 8 samples - 50.0%) were recorded at DEQ's ambient water quality monitoring station (8-SAR076.10) at the Route 604 bridge to assess this stream segment as not supporting of the recreation use goal for the 2006 water quality assessment. The segment was previously listed for a fecal coliform bacteria impairment, beginning in 2004.

Sources: Source Unknown

Recreation	**Fecal Coliform**		00854	**2004**	**2016**	For the 2004 assessment, two of 18 samples (11.1%) exceeded the instantaneous fecal coliform criteria resulting in an assessment of not supporting the recreation use goal. For this assessment period, one of nine samples (11.1%), from station 8-SAR070.96, at Route 646, exceeded the instantaneous fecal coliform criteria. Based on the fecal coliform data, there is insufficient information to determine if the use is supported or not. The segment will remain listed for a fecal coliform bacteria impairment.

Aquatic Life	**Oxygen, Dissolved**	315.00 ACRES	70000	**2006**	**2018**	VAT-F26L-01

Water quality monitoring was performed at four stations on Waller Mill Reservoir. Dissolved oxygen violations in bottom waters were observed at all four stations. The downstream stations all showed evidence of stratification and the TSIs were <60, indicating mesotrophic conditions. Therefore it is believed that the DO violations are caused by natural stratification and not indicative of nutrient overenrichment.

However, station 8-QEN008.58 did not meet the current assessment guidance definition of stratification (>4°C differential during June through September), although the station was stratified in April. Because the station was not stratified during the summer months, the station, and therefore the entire lake must be classified a Category 5A water.

The segment is included under a 12/13/2004 VDH Fish Consumption Advisory due to polychlorinated biphenyls (PCBs) in fish tissue. The advisory recommends that adults eat no more than two meals/month of croaker, gizzard shad, and spot. High risk individuals such as women who are pregnant or may become pregnant, nursing mothers, and young children are advised not to eat any fish contaminated with PCBs.

Use	Impairment	0.39 SQUARE MILES	TMDL Group ID	First Listed on 303(d)	TMDL Schedule	Impairment Specific Comments and/or Impairment Specific VA Category
Aquatic Life	**Oxygen, Dissolved**		01778	**1998**	**2010**	VAP-F14E-05

The tidal Pamunkey River was initially listed on the 1998 303(d) list as fully supporting but threatened of the aquatic life use goal because a 1995 special study showed river subject to 33% violation rate of daily mean DO standard during warm weather conditions May through October. The estuarine Pamunkey River is considered fully allocated relative to dissolved oxygen. New discharges cannot result in further DO depression.

The Chesapeake Bay and its tidal tributaries were added by EPA to the 1998 303(d) list. EPA listed the impairment as dissolved oxygen violations caused by nutrient overenrichment. This listing included the entire mainstem estuarine Pamunkey River.

During the year 2004 cycle, the DO violation rate was 0/47 at 8-PMK048.80, 0/48 at 8-PMK006.36, 0/213 at 8-PMK034.17, 0/48 at 8-PMK056.87, and 10/200 at 8-PMK006.36. No chlorophyll A violations were recorded.

However, during the 2006 cycle, the new Chesapeake Bay water quality standards were adopted. The mesohaline York segment (which includes the mouths of the Pamunkey and Mattaponi Rivers) failed the CB 30-day open water summer dissolved oxygen criteria and the Shallow Water SAV acreage requirements.

VA Overall AU Category: **5A**

Use	Impairment	11.56 SQUARE MILES	TMDL Group ID	First Listed on 303(d)	TMDL Schedule	Impairment Specific Comments and/or Impairment Specific VA Category
Aquatic Life	**Oxygen, Dissolved**		01779	**2004**	**2010**	VAT-F26E-08 (and 2004 fact sheet VAT-F27E-03 also) The mainstem York River was included in EPA's 1998 303(d) Overlisting as impaired of the Aquatic Life Use; the impairment was attributed to excessive nutrients. In addition, there were sufficient exceedances of the standard for Dissolved Oxygen at bottom water (deeper than 10 meters) observations at monitoring station on the York River (8-YRK011.14 & 8-YRK001.64) to assess this segment as not supporting of the Clean Water Act's Aquatic Life Use Support Goal for the 2002 305(b) report. The cause of the standard violation was attributed to naturally occurring conditions in bottom waters of deep estuarine trenches. During the 2006 cycle, the revised Chesapeake Bay water quality standards were adopted. The York Polyhaline segment failed both the Open Water Use's summer dissolved oxygen criteria and the Shallow Water Use's submerged aquatic vegetation acreage requirements. There was insufficient data to assess the Deep Water Use.
